

SUPPLEMENTARY INFORMATION

The Infrafamilial Taxonomy of African Sapindaceae

Temitope O. Onuminya,* Oluwatoyin T. Ogundipe and James D. Olowokudejo

Department of Botany, University of Lagos, Akoka-Yaba, Lagos, Nigeria

*tadeyemi@unilag.edu.ng

Taxonomic Treatments

Family: SAPINDACEAE Juss.

Sapindaceae Juss. nom. cons. Gen. Pl.: 246. (1789).

Type genus: *Sapindus* L. nom. cons. Gen. Pl. 1: 359. (1737).

Description

Trees or shrubs (or woody vines with tendrils in *Cardiospermum* and *Paullinia*), rarely herbaceous climbers. Indumentums is usually of simple hairs, often glandular on young parts, buds, and inflorescences. Leaves alternate, usually estipulate; leaf blade pinnate or digitate, mostly compound, a few simple (*Dodonaea* and *Pappea*); leaflets alternate or sub-opposite, entire or dentate to serrate. Inflorescence is a terminal or axillary thyrse. Flowers are usually unisexual, actinomorphic or zygomorphic, usually small. Sepals are 4 or 5(or 6), equal or unequal, free or connate at base. Petals are 4 or 5(or 6), sometimes absent, free, imbricate, usually clawed, often with scales or hair-tufted basal appendages. Fruit, a capsule, berry or drupe, or consisting of 2 or 3 samaras, often 1-seeded and 1-loculed by abortion. Seeds 1 (or 2 or more) per locule; testa black or brown, hard, often with a conspicuous fleshy aril.

Subfamily SAPINDOIDEAE Burnett Outl. Bot.: 889. (1835).

Type genus: *Sapindus* L.

Specimen examined: Ghana, Legon Bot. nursery, Akpabi G., 23 Apr 1957, GCH 1834; Aburi Botanic Gardens, Hall et al., 26 Mar 1976, GCH 45844;

Nigeria, Abeokuta, Stanfield, 24 Aug 1962, FHI 45605; Abeokuta, Daramola, B.O, 31 Aug 1968, FHI 61564

Description: Trees, shrubs or vines. Leaves spirally arranged or opposite on the branches. Flowers 4 or 5 fold. Carpels usually three (two to six) with a single ovule.

Tribe - Thouinieae Blume emend. Radlk. Rumphia 3: 186. (1847).

Type: *Thouinia trifoliolata* Poit. Antilles Ann. Mus. Paris: 72. (1804).

Genus- *Allophylus* L. Sp. Pl. 1: 348. (1753).

Type species: *Allophylus zeylanicus* L. Sp. pl. 1: 348. (1753).

Ivory coast, Amshoff, 14 Jul 1967, UGH 278;

Description: Shrubs, rarely trees [rarely woody climbers], monoecious or dioecious. Leaves 3-foliate, usually minutely glandular and serrate, often associated with tufts of hairs in the axils of the main nerves beneath. Inflorescences axillary, racemose or compound racemose. Flowers unisexual, usually male and female in the same inflorescence. Sepals 4, the 2 outer are larger, petals 4, each with a hairy scale, green, white or yellow. Fruit parted into 2 or 3 schizocarps, often only 1 developed, berrylike, subglobose or ovoid. Seeds ellipsoidal to globose, black, without arillode.

Tribe - Paullinieae Kunth ex DC. Prodr. 1: 601 (1824).

Type: *Paullinia* L. Sp. Pl. 1: 366. (1753).

Genus- *Cardiospermum* L. Sp. Pl. 1: 366. (1753).

Type species: *Cardiospermum halicacabum* L. Sp. Pl. 1: 366. (1753).

Ghana, Bui dom site, A.A. Enti, 17 Aug 1964, GCH 35098; Mahkrong, Morton J. K., 10 Apr 1954, GCH 4589;

Description: Annual or perennial climbing herbs, stems ridged, stipules small. Leaves alternate, compound (2-ternate to apparently pinnate). Inflorescence axillary, at the apex of a relatively long peduncle, with a pair of coiled tendrils just below. Flowers zygomorphic, bracts minute, sepals 4; lateral small, the other 2 larger; petals 4, stamens 8, ovary 3-locular. Fruit an inflated membranous capsule. Seed black with a white, ovate to reniform (sometimes heart-shaped) hilum.

Genus - *Paullinia* L. Sp. Pl. 1: 366. (1753).

Type species: *Paullinia pinnata* L. Sp. Pl. 1: 366. (1753).

Description: Dioecious trees or shrubs. Leaves paripinnate; leaflets in 2-11 pairs. Inflorescence a terminal or axillary thyrsse. Flowers actinomorphic, sepals 5, free or almost so, petals present, well-developed, 5, ciliate, with a deeply 2-lobed scale at the base. Stamens 12-30. Ovary (2)3(5)-locular; each loculus 1-ovulate. Fruits of (2)3(5) cocci, sub-spherical, indehiscent, seed 1 per coccus.

Genus - Sapindus L. nom. cons. Gen. Pl. 1: 359. (1737).

Type species: *Sapindus saponaria* L. Sp. Pl. 1: 367. (1753).

Specimen examined: Ghana, Legon Bot. nursery, Akpabi G., 23 Apr 1957, GCH 1834; Aburi, Hall et al., 26 Mar 1976, GCH 45844;

Description: Trees, rarely shrubs, monoecious. Leaves paripinnate, rarely simple, alternate,

estipulate; leaflets entire, opposite or alternate. Thyrses large, many branched, terminal or fascicled at branchlet apices. Flowers unisexual, actinomorphic or zygomorphic, sepals 5 or sometimes 4, imbricate, outer 2 smaller, petals 5, clawed, with 2 earlike scales at base or margin thickened adaxially. Fruits trilobed.

Tribe - Lepisantheae Radlk. Sitzungsber. Math.-Phys. Cl. Königl. Bayer. Akad. Wiss.

München 8: 269. (1878).

Type: *Lepisanthes* Blume. Bijdr. Fl. Ned. Ind. 237: (1825).

Genus - Chytranthus Hook. f. Gen. Pl. 1(1): 403. (1862).

Type species: *Chytranthus mannii* Hook f. Gen. Pl. 1: 404. (1862)

Description: Shrub or tree. Leaves compound paripinnate, pubescent or glabrescent, hairy on the petioles, rhachides, petiolules and midrib. Leaflets oblong to elliptic, apex acuminate, base cuneate. Inflorescence raceme. Stamen 7-9.

Genus - Glenniea Hook. f. Gen. Pl. 1: 404 (1862).

Syn.: *Crossonephelis* Baill. Adansonia 11: 245. (1874).

Specimen examined: Nigeria, Abeokuta, Binuyo, 28 Jan 1961, FHI 40899; Abeokuta, Onochie, 9 Oct 1945, FHI 13543; Abeokuta, Onochie, 19 Jun 1945, FHI 3444; Abeokuta, Binuyo, 25 Jan 1961, FHI 40885; Abeokuta, Onochie & Latilo, Apr 1956, FHI 32448;

Liberia, Grassfield, J.G. Adam, 24 Sep 1971, FHI 84378;

Description: Small trees or shrubs, monoecious or dioecious. Leaves spirally arranged or partly decussate, unifoliolate or paripinnate. Leaflets opposite to alternate, ovate, beneath smooth, glabrous or variably hairy; base symmetrical or slightly oblique; margin entire; veins and veinlets finely reticulate. Inflorescences terminal and usually in the upper leaf-axils, thyrsoid or paniculate with few spreading branches. Flowers actinomorphic, unisexual, sepals 4 or 5, connate at base, petals absent. Fruits variable, indehiscent with a thick pericarp and membranous to thin-crustaceous endocarp, wings absent. Seeds with a thin-crustaceous testa, closely adhering to the endocarp, no arillode.

Genus - Lepisanthes Blume. Bijdr. Fl. Ned. Ind. 237: (1825).

Type species: *Lepisanthes montana* Blume. Bijdr. Fl. Ned. Ind. 5: 238. (1825).

Specimen examined: Nigeria, Idanre, Chizea, 26 Oct 1961, FHI 44501; Idanre, Daramola, 18 Aug 1956, FHI 35294; Adamawa, Daramola, 19 Nov 1954, FHI 28718; Ibadan, Onochie, 4 Nov 1955,

Description: Trees or shrubs, monoecious. Leaves usually paripinnate, alternate, estipulate, usually petiolate; leaflets 2 to several pairs, opposite or alternate, usually entire. Flowers unisexual, actinomorphic or zygomorphic, sepals 5, leathery, concave, imbricate, outer 2 smaller, orbicular, inner ones usually broadly ovate or elliptic, petals 4 or 5, often spoon-shaped, longer than sepals, base clawed, apex with adaxial scale. Fruit ellipsoidal, 2- or 3-loculed; pericarp leathery or slightly fleshy, both sides or only abaxially hairy, rarely glabrous on both sides. Seeds ellipsoidal, bilaterally slightly flat.

Genus - Pancovia Willd. Sp. Pl. 2: 280-285. (1799).

Type species: *Pancovia bijuga* Willd. Sp. Pl. 2: 285. (1799).

Specimen examined: Nigeria, Lagos, Opayemi J, 25 jan 1973, LUH 765; Lagos, Ebile & Daramola, 10 Jun 1971, FHI 64019; Ogun, Onochie, 29 Dec 1952, FHI 32033; Lagos, Juillick, 17 Jan 1965, FHI 56562; Gashaka, Chapman, 6 May 1977, FHI 106708; Lagos, Orebanjo, FHI 55822.

Ghana, Cape coast, Hall J. B, 13 Mar 1956, GCH 292; Legon Hills, C.D. Adams, 2 Jan 1956, GCH 3669; River Daroa, J.K Morton, 21 Feb 1952, GCH 6470; Pokoase, Irvine F.R, Feb 1935, GCH 2658.

Description: Trees or shrubs. Leaves paripinnate. Inflorescence usually a raceme-like thyrse. Flowers unisexual, zygomorphic, sepals 4-5, unequal, connate to form a campanulate calyx, petals 3-4, unguiculate. Fruit indehiscent, fleshy, seed flattened.

Genus - Placodiscus Radlk. Sitzungsber. Bayer. Akad. Wiss. Munchen 8: 332. (1878).

Type species: *Placodiscus turbinatus* Radlk. Sitzungsber. Math.-Phys. Cl. Königl. Bayer. Akad. Wiss. München 8: 270. (1878).

Specimen examined: Nigeria, Calabar, Binuyo, 29 Jan 1962, FHI 45461; Calabar, Okafor, 22 Feb 1957, FHI 36423; Calabar, Onochie, 18 Jan 1957, FHI 36040; Ogoja, Binuyo, 12 May 1959, FHI 41293; Benin, Odewo T.K. 29 Jun 1984, FHI 101699

Cameroun, Kumba, Ejiofor, 23 Feb 1946, FHI 14075; Korup Nat. Park, Odewo T.K., 3 Apr 1988, FHI 105431

Description: Tree 5-12 m; glandular hairs present; leaves 30-40 cm long, petiole 2-11 cm, rachis 5-16 cm, drying pale green; leaflets in 4 pairs, oblong-elliptic, 15-21 cm long, 3-7 cm wide, hairy beneath, acuminate at apex (1-1.5 cm long), petiolules 3-5 mm long.

Genus - Radlkofera Gilg. Bot. Jahrb. Syst. 24: 300. (1897).

Type species: *Radlkofera calodendron* Gilg. Engl. & Prantl. Nat. Pflanzenfam. Nachtr. Sapindaceae 1: 228. (1897); Bot. Jahrb. Syst. 24: 300. (1897).

Specimen examined: Nigeria, Calabar, Okeke et al., 14 Aug 1974, FHI 1073355; Benin, Chizea L.G., 19 Nov 1948, FHI 24470; Benin, Onochie, 21 Jun 1957, FHI 31223; Benin, J.R. Charter, May 1957, FHI 31298; Benin, Keay, 15 Aug 1960, FHI 37942;

Description: Tree, palm-like, usually unbranched, monoecious, 4-15 m tall; trunk 20 cm, sometimes divided near the base; leaves tufted at apex, 1-2 m long, 40-50 cm wide, petiole 25-30(-50) cm long, 1.5 cm, brownish velvety like the rachis.

Tribe - Melicocceae Blume Rumphia 3: 142. (1847).

Type: *Melicocca* L. Sp. Pl., ed. 2(1): 495. (1762).

Genus - Melicoccus P. Browne., Civ. Nat. Hist. Jamaica: 210. (1756).

Type species: *Melicoccus bijugatus* Jacq. Enum. Syst. Pl. 19. (1760).

Specimen examined: Cameroon, Victoria Bot. gardens, Ogu, 13 Apr. 1960, FHI 52431; Victoria Bot. gardens, Ogu, 13 Apr. 1960, HNC 34898;

Ghana, Aburi Gardens, Irvine F.R., Jan 1933, GCH 1882;

Description: Tree, 10-25 m (33-82 ft) tall. Leaves alternate, 8-5 cm long, pinnate with two or four opposite leaflets (no terminal leaflet). Leaflets usually 4 to 14 cm long (sometimes as much as 20 cm) and 2.2 to 5 cm wide (occasionally up to 7 cm). Flowers in panicles at the tips of branches, greenish-white, unisexual, either with male and female inflorescences on the same tree, or on separate trees. Fruits drupaceous, green, ovoid, seed ovoid with a fleshy tan-coloured edible seed coat.

Tribe - Nephelieae Radlk.sitzungsber. Math –Phys. Cl. Konigl. Bayer. Akad. Wiss. Munchen

Type: *Nephelium* L. Syst. Nat., ed. 12. 2: 623. (1767); alt. publ.: Mant. Pl. 18: 125. (1767).

Genus - Litchi Sonn. Indes Orient. 3: 255. (1782).

Type species: *Litchi sinensis* Sonn. Voy. Indes Orient. 2: 230. (1782).

Specimen examined: Nigeria, Calabar, Daramola, 3 Aug 1964, FHI 55213; Ogoja, Latilo & Olorunfemi, 9 May 1961, FHI 43926;

Description: Evergreen Tree dense, monoecious, round-topped, slow-growing, 9-30 m high. Leaves, 12.5-20 cm long, paripinnate, leaflets 4-8 pairs, alternate, elliptic-oblong to lanceolate, abruptly pointed, leathery, smooth, glossy, dark-green on the upper surface and grayish-green beneath, 5-7.5 cm long. Flowers in terminal clusters, unisexual, actinomorphic, greenish-white to yellowish, 75 cm long. Fruits, in loose, pendent clusters of 2-30, deeply parted into 2 or 3 schizocarps, usually strawberry-red, sometimes rose, pinkish or amber, and some types tinged with green; 2.5 cm wide, 4 cm long; skin thin, leathery, rough or minutely warty, flexible and easily peeled when fresh. Seed 20 mm long, hard, with a shiny, dark-brown coat.

Genus - Nephelium L. Syst. Nat., ed. 12. 2: 623. (1767); alt. publ.: Mant. Pl. 18: 125. (1767).

Type species: *Nephelium lappaceum* L. Mant. Pl. 1: 125. (1767).

Specimen examined: Nigeria, Calabar, Daramola, 3 Aug 1964, FHI 55213; Ogoja, Latilo & Olorunfemi, 9 May 1961, FHI 43926

Ghana, Kade, J. B. Hall, 14 Jul 1976, GC 46110;

Description: Evergreen trees, rarely shrubs, monoecious or dioecious, 12-20 m. Leaves paripinnately compound, alternate, petiolate, 10-30 cm long, with 3-11 leaflets, each 5-15 cm wide, 3-10 cm broad, with an entire margin. Flowers unisexual, actinomorphic, small, 2.5-5 mm, apetalous, discoidal, borne in erect terminal panicles 15-30 cm wide, calyx cupular, 5- or 6-lobed; sepals small, valvate or imbricate, often opening early. Fruits drupe deeply parted into 2 or 3 schizocarps, round to oval, 3-6 cm (8 cm) tall and 3-4 cm broad with a leathery skin. Seed glossy brown, 1-1.3 cm.

Tribe - Schleichereae Radlk. Ind. Gen.: 76. (1887).

Type: *Schleichera* Willd. Sp. Pl., ed. 4(2): 892, 1096. (1806).

Genus - *Haplocoelum* Radlk. Sitzungsber. Bayer. Akad. Wiss. Munchen 8: 336. (1878).

Type species: *Haplocoelum inopileum* Radlk. Sitzungsber. Math. – Phys. Cl. Konigl. Bayer. Akad. Wiss. Munchen 8: 337. (1878)

Specimen examined: Cameroon, Barouma, Fotius, 15 Jun. 1974, HNC 38236; Villiers, J.F. 20 Jul. 1986, HNC 59423; Letouzey, 5 Sept. 1964, HNC 8934

Description: Dioecious trees or shrubs. Leaves paripinnate. Inflorescence short, raceme-like. Flowers unisexual, actinomorphic, apetalous, sepals 5-6. Fruit indehiscent, 1-seeded by abortion. Seed with an arillode nearly covering the seed.

Genus - *Lecanioidiscus* Planch. ex Benth. Niger Fl.: 250. (1849).

Type species: *Lecanioidiscus cupanioides* Planch. Niger Fl.: 251. (1849).

Specimen examined: Nigeria, Osun, Abolade G.O, 28 Aug 2008; Lagos, Hossan M & Opayemi J, 15 Apr 1971, LUH 281; Osun, Bakare, 5 Nov 1991, FHI 104242; Lagos, Hossain, 15 Apr 1971, FHI 68408; Lagos, Hossain M & Opayemi J, 15 Apr 1971, LUH 219; Birnin, Harris, 20 May 1978, ABU 6981; Benin, Emwiogbon, 7 Mar 1969, FHI 61609; Ibadan, Opayemi J, 10 Apr 1967, LUH 4; Oyo, Ighanesebor, 15 Apr 2977 FHI 89577; Oyo, Ujor E, 8 Mar 1952, FHI 27974; Zaria, Keay & Jones, 13 Apr 1958, FHI 37626; Ondo, Olorunfemi, 29 Jul 1980, FHI 93703; Cameroon, Ndembia, Leewenborg, 16 Jun 1965, FHI 68988; Ndembia, Leewenborg, 16 Jun 1965, SRFK 19388; Bertoua, Breteba, 20 May 1961, SRFK 10696; Akonolinga, Letouzey, 24 Feb 1962, SRFK 6218; Yaounde, Mpom B, 22 Mar 1960, SRFK 4297; Ngambe, B.A. Nkongmeneck, 16 Mar 1984, SRFK 60055; Linte, Ngameni, 2 May 1978, SRFK 41815; Buea-Doula Road, Letouzey, 4 May 1976, SRFK 38969; Yaounde, Letouzey, 7 Jul 1972, SRFK 28394; Ghana, A.J.M Leuweenberg, 11 Mar 1977, GCH 11196; Senchi Ferry, F.R., June 1932, GCH 1783; Mankrong, Morton J.K., 10 Apr 1954, GCH 4603;

Description: Tree (2)-10-12(-30) m, sometimes shrub 1.5-3 m tall, dioecious; bole to 15 m high, 10-50 cm, often with many adventitious shoots near base; crown spreading; young branchlets with dense orange soft curly hairs.

Genus - *Schleichera* Willd. Sp. Pl., ed. 4(2): 892, 1096. (1806).

Syn.: *Koon* Gaertn.

Type species: *Schleichera trijuga* Willd. Sp. Pl. 4: 1096. (1806).

Specimen examined: Cameroon, Jacarand & Rock Garden, 14 Mar. 1934, FHI 12061; Victoria Botanic Gardens, de Wild, FHI 9313.

Description: Trees dioecious. Leaves paripinnate, 2-4-jugate; rachis not winged; no pseudo-stipules, leaflets sub-opposite (to alternate), margin entire. inflorescences in the defoliated part of the branchlets above the leaf-scars, sometimes axillary, flowers sometimes male and female flowers present in the same inflorescence, sepals 4 or 5 (or 6), petals absent. Fruit a hard-crustaceous, dry berry, 1- (or 2) celled, not winged, either smooth or with patent, simple or branched, strong thorns, glabrous. Seeds completely enveloped by a thin-papery arillode, often adhering to the endocarp when dried.

Tribe - Cupanieae Reich. Conspl. Reg. Veg.: 200. (1828).

Type: *Cupania* L. Gen. Pl. (1737).

Genus - Aporrhiza Radlk. Sitzungsber. Bayer. Akad. Wiss. Munchen 8: 338. (1878).

Type species: *Aporrhiza paniculata* Radlk. Sitzungsber. Math.-Phys. Cl. Königl. Bayer. Akad. Wiss. München 8: 339. (1878).

Specimen examined: Nigeria, CR, Emwiogbon, 11 May 1978, FHI 87370; Uwet, Binuyo, 31 Jul 1959, FHI 41423; CR Oban, P. Tuley, 13 Jul 1964, FHI 5439; Benin, Sapoba, Kennedy, 1 Sep 1952, FHI 9268; Sapoba forest, Emwiogbon, 26 Jan 1966, FHI 57920.

Ghana, Lock & Hall, 28 Jun 1972, GCH 43491; Lock & Hall, 24 Sep 1976, GCH 46467; Hall & Nabooth, 25 May 1977 GCH 46617; P. Cudjoe, 23 Sep 1954, GCH 4817

Description: Tree 4.5–22 m tall; bark smooth, grey; young parts and fruits with a short, velvety, reddish or grey-green pubescence. Petiole 1–9 cm long, woody; rachis 10–36 cm long; leaflets in 3–5 pairs, sub-opposite; petiolules fleshy, sparsely pilose; blade oblong-elliptic or elliptic, the terminal pair largest, 9–25 cm long, 5–9 cm wide, the other pairs progressively smaller, shortly and bluntly acuminate, the base acute. Inflorescence-axes 20–50 cm long; branches 2–16 cm long. Calyx-lobes green, 2 mm long, petals yellow or white, equalling the sepals, ovate, ciliate. Seed black, 1.3 cm long, 5 mm wide, covered by an orange aril.

Genus - Laccodiscus Radlk. Sitzungsber. Bayer. Akad. Wiss. Munchen 9: 477, 496, 535. (1879).

Type species: *Laccodiscus ferrugineus* (Bak.) Radlk. Sitzungsber. Bayer. Akad. Wiss. Munchen 9: 477. (1879)

Specimen examined: Nigeria, Calabar, Ikom, Jones & Onochie, 12 May 1946, FHI 8303; Akamkpa-Odukpani forest, Ariwaodo, J.O., 3 May 1977. FHI 92550; 4 miles on ikom road from ikom to etomi, A.P.D. Jones, 7 May 1946, FHI 17446; Bendeghe-Ayuk village Ikom, Latilo & Oguntayo, 27 Feb. 1973, FHI 67713.

Description: Shrub, erect, 2-3 m tall, or scandent 5-6 m, or tree 6-7 m, all parts densely clothed with brown hairs 1-2 mm long; monoecious; leaf petiole 6-15 cm long; leaflets in 3-5 pairs, oblong, acuminate, dentate in upper half, 7-22 (-30) cm long and 4-10 cm wide. Fruits bright red when ripe, seeds with a bright orange aril.

Genus - Lychnodiscus Radlk. Sitzungsber. Bayer. Akad. Wiss. Munchen 8: 271. (1878).

Type species: *Lychnodiscus reticulatus* Radlk. Sitzungsber. Bayer. Akad. Wiss. Munchen 8: 333. (1878).

Description: Slender, small to medium-sized tree up to 20 m tall; bark smooth, greyish white; twigs soft short-hairy. Leaves alternate, paripinnately compound with 6–7 pairs of leaflets; stipules absent; petiole up to 10 cm long, rachis grooved, up to 60 cm long; petiolules 3–6 mm long; leaflets opposite to alternate, oblong-elliptical to ovate-oblong, 11–15 cm long, 3–5 cm wide, acuminate at apex, margins usually toothed, pinnately veined with 10–16(-22) pairs of lateral veins. Inflorescence an axillary or terminal panicle up to 45 cm long, brown hairy. Flowers unisexual,

regular, 5-merous; pedicel 4–6 mm long; sepals 2.5 mm long, fused at base; petals free, funnel-shaped, 3–3.5 mm long, whitish, with a reflexed hairy scale just below the apex; stamens 10–13. Fruit a 3-lobed ellipsoid to ovoid capsule up to 2 cm long, hairy, red when ripe, dehiscent, (1–) 3-seeded. Seeds 3-angled, up to 18 mm long, covered by a waxy, red aril.

Genus - Eriocoelum Hook. f. Gen. Pl. 1 (1): 400. (1862).

Type species: *Eriocoelum paniculatum* Bak. Explor. Bot. Afrique Occ. Franc. 154. (1920).

Chev., Bull. Soc. Bot. France 58: Mem.: 148 (1912).

Type species: *Majidea zanguebarica* Kirk. Sitzungsber. Math.-Phys. Cl. Königl. Bayer. Akad. Wiss. München 20: 279. (1890).

Specimen examined: Cameroon, Victoria, Letouzey, 20 Jun 1963, FHI 9291.

Description: Tree, 2-22-25 m; bark rough or smooth, whitish, slash cream orange; young branchlets pale-mid-brown, lenticels conspicuous; leaflets (5-7 pairs) 3-6 cm long, glabrous, shining, drooping when young; flowers pink or red.

Genus - Harpullia Roxb. Fl. Ind. 2: 441. (1824).

Type species: *Harpullia pendula* Planch. ex F.Muell. Trans. Philos. Soc. Victoria 3: 26. (1859).

Description: Shrubs to medium-sized trees, dioecious. Leaves paripinnate, 1-9-jugate, without pseudostipules; (petiole and rachis winged). Leaflets alternate (or opposite), not papillate beneath; margin entire. Inflorescences axillary, terminal. Flowers unisexual, actinomorphic, sepals 5, free, imbricate, petals 5, longer than the sepals. Fruits capsules, 2- or 3-lobed, the lobes erect to spreading, inflated, round. Seeds with a thin-crustaceous testa; arillode, covering half the seed and without appendages; hilum covering less than 1/6 of the seed.

Tribe - Dodonaeae Kunth Nov. Gen. Sp. 5: 100. (1821).

Type: *Dodonaea* L. ed. 1. Append. *Octandriae*: 341. (1737).

Genus - Dodonaea L. Gen., ed. 1. Append. *Octandriae*: 341 (1737).

Syn.: *Dodonaea* Mill. Gard. Dict. Abr. (ed. 4) no. 1: (1754).

Type species: *Dodonaea viscosa* (L.) Jacq. Enumeratio Systematica Plantarum 19. (1760).

Specimen examined: Nigeria, Takwa Bay, Hassan M, 31 mar 1971, LUH 795; Takwa Bay, Hassan M, 31 mar 1971, LUH 796; Zaria, Kershaw, 3 Mar 1964, ABU 900241; Takwa Bay, Student, 31 Mar 1971, ABU --; Zaria, Ohaeri, 16 Jun 1971, ABU 201; Zaria, Oguntayo, 25 Feb 1977, FHI 89651; Kangora Forest, Fagbemi, 25 Feb 1977, FHI 89846; Kano, Ufor Edwin, 24 May 1949, FHI 26181; Jos, Fagbemi, 8 Mar 1979, FHI 89875; Nigeria, Zaria, Fagbemi, 25 Feb 1977, FHI 89849; Zaria, Clayton D, Apr 1957, FHI 5190; Gemba, Daramola& Latilo, 7 Jan 1955, FHI 34652; Bar beach, Onochie, 7 Dec 1954, FHI 34656; Epe, Ponman, 22 Feb 1946, FHI 14857; Eket, Onochie, 13 May 1953, FHI 32944;
